

The charge of cellular shield driving method material

OK-1

Special foaming agent O.K.-1 is an anionic system surface-active agent used for cosmetics, a shampoo, etc., and since biodegradability is good, it is decomposed for a short period of time in soil.

The shape of generality of OK-1

Ingredient	ANION-BASED SURFACTANT
Appearance etc.	Frank yellow transparent liquid
Specific gravity	1.05± 0.005
ph	7.5-8.5 (1.0%)

Basic combination

Combination per special foam material 1m³

		Unit	A type	B type for gelling
Combination	Special foam material (OK-1C)	kg	15	7
	Foam additive (OK-3)	kg	-	6
	Prevention material from	L	-	2
	Water	L	985	988

Foaming magnification

In an A type case, foaming magnification should set up 8 to 10 times, and B type for gelling 4 to 6 times.

Applicable laws and regulations

The chemical management promoting method, a toxic substance and the highly poisonous substance controlling method, labor security and hygiene law, the Sea Pollution Prevention Act

It does not correspond to the above-mentioned law.

Load Figure

200kg drum, a 1,000kg IBC tank
